EDUCATION

New York University **Expected May 2028**
B.A. in Mathematics and Computer Science *Manhattan, NY*

- **Clubs:** Competitive Programming Club, Volleyball Club, Tech@NYU
- **Relevant Coursework:** Algorithms, Data Structures, Linear Algebra

EXPERIENCE

Accenture **June 2026 - August 2026**
Technology Consultant Summer Analyst *New York, NY*

- Led requirements-gathering sessions with 5 client stakeholders across HR, IT, and vendor teams, resolving scope ambiguity and converting business needs into technical design specifications for inbound and outbound integrations.
- Owned end-to-end delivery of 3 vendor integrations — activity logging, outage management, time tracking — within a 30+ integration Workday implementation for a Fortune 500 client, coordinating across internal delivery teams and external vendor contacts to hit the testing phase.
- Designed edge-case test scenarios across 7 vendor integrations to surface failure modes pre-production.

People Incorporated **June 2025 – January 2026**
Software Engineering - AI Productivity *New York, NY*

- Built an OpenAI-based transcription pipeline to replace the legacy Deepgram API, saving over $20K a year in API costs and cutting transcription time by 8%.
- Built an FFmpeg chunking pipeline that splits, processes, and reassembles audio to bypass OpenAI's 25MB file size limit, raising transcription accuracy by 12% on hours-long podcasts.
- Resolved a speaker mismatch in the diarization pipeline by sampling a short reference clip of each voice and matching subsequent chunks against it, producing consistent speaker IDs across long audio.

NibbleByte - Roblox **August 2025 – November 2025**
Gameplay Programmer Contractor *Remote*

- Co-built a roblox game - Be Dino which has amassed 100M+ visits and 1.5M+ in Annual Recurring Revenue.
- Directed Claude-based agent workflows to plan, generate, and validate Luau systems, reducing manual effort across the stack.
- Directed team of 5 engineers to build the dinosaur growth and pathfinding systems in Luau.

University at Buffalo, School of Applied Science and Engineering **September 2024 – May 2025**
Undergraduate Research Assistant *Buffalo, NY*

- Built a Flask web app around a game theory model for security administrators to simulate deployments in real time.
- Built an interactive heatmap of Boston transit overlaying population density and station traffic to surface high-risk stations.
- Presented data-driven security insights and visualizations to PhD researchers, administrators, and stakeholders.

PROJECTS & ACHIEVEMENTS

First Gig – Help Teens Find Jobs

- Built a React Native iOS app and a React web companion sharing one onboarding flow and data model.
- Partnered with a local recreation center to roll out 100+ jobs on-platform this fall, with ongoing talks with YMCA and other chain brands to expand future postings.
- Pitched the app to the NYC Public Schools superintendent to drive student adoption through school counselors and received agreements to promote the app.

IAC Philanthropy Pitch – 1st Place Winners

- Led a 5-person team to win IAC's Philanthropy Pitch competition, securing a $50,000 grant for America On Tech — a nonprofit expanding tech access for underrepresented youth. Built the case on impact data and delivered the pitch to a panel of IAC executives.

SKILLS & INTERESTS

Language: Python, Java, C, C++, JavaScript, TypeScript, Luau
Framework/Libraries: React, React Native, NestJS, FastAPI, Flask, Node.js
Concepts/Methodology: Agile, Agile Methodology, CI/CD, Software design, Software development, REST API
Tools/Technology: Docker, Git, PostgreSQL, Redis, Claude, FFmpeg, Jenkins, GitHub Actions
